

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application.

Listing of Claims:

1. (Currently amended) A method for modeling a system having one or more components, comprising:
 - (a) dividing said system into one or more components;
 - (b) defining a plurality of realms, wherein each of said realms contains objects representing attributes and relationships of selected ones of said one or more components, wherein said one or more components represented include at least one physical element of the system; wherein each of said plurality of realms contains at least one object common to at least two of said plurality of realms;
 - (c) defining associations between said plurality of realms to unify objects in said plurality of realms, wherein said associations represent an identification of said at least one object common to at least two of said plurality of realms; and
 - (d) unifying objects in said realms based on said associations that said at least one object is common to at least two of said plurality of realms; and
 - (e) processing a function in a first realm of said plurality of realms independent of said other realms of said plurality of realms; and [[,]] and based on said processing

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

(f) propagating a behavior, based on a result of said function, of one of the unified objects of said first [[one]] realm to said unified object of another a second realm of said plurality of realms using said at least one association between the [[one]] first realm and the second another realm to determine the impact of the function of the first realm in the second realm.

2. (Currently Amended) The method of Claim 1, further comprising the step of:

~~unified processing of two or more realms by performing processing in each of said two or more realms, and~~

combining results thereof based on said associations of said two or more realms.

3. (Previously presented) The method of Claim 1 wherein said system is an enterprise management system.

4. (Previously presented) The method of Claim 1 wherein said realms comprise at least one realm modeling business service components and at least one realm modeling infrastructure components.

5. (Previously presented) The method of Claim 2 wherein the unified processing identifies infrastructure problems impacting applications, applications impacting services, or infrastructure problems impacting services.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

6. (Previously presented) The method of Claim 1 wherein said system is selected from a group consisting of: an engineering system, a distributed system, and application server system, a networked system, an optical system, a wireless network, an IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an automatic computing system, a grid system, and on-demand system, and an adaptive system.

7.- 19. (Cancelled)

20. (Previously presented) The method of Claim 1 wherein said system comprises a network, and wherein said plurality of realms comprises at least one realm modeling network infrastructure components and at least one realm modeling network security components.

21. (Previously presented) The method of Claim 1 wherein the step of defining a plurality of realms is performed manually.

22. (Previously presented) The method of Claim 1 wherein the step of defining a plurality of realms is performed automatically based on given properties of said one or more components.

23. (Previously presented) The method of Claim 1 wherein 1 wherein the step of defining associations is performed manually.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

24. (Previously presented) The method of Claim 1 wherein the step of defining associations is performed automatically based on given properties of said objects.

25. (Previously presented) The method of Claim 1 wherein the step of defining associations comprises identifying objects in different realms representing the same component.

26. (Previously presented) The method of Claim 25 wherein the objects in different realms are substantially identical.

27. (original) The method of Claim 25 wherein the objects in different realms are different.

28. (original) The method of Claim 27 wherein the objects in different realms have different attributes.

29. (original) The method of Claim 1 wherein step (c) comprises defining a relationship object between objects in different realms.

30. (original) The method of Claim 1 wherein said plurality of realms are defined based on selecting subsets of components in said system.

31. (original) The method of Claim 1 wherein said plurality of realms are defined based on different perspectives of the same component in said system.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

32. (original) The method of Claim 1 wherein said plurality of realms are defined based on different levels of abstraction of the same component in said system.

33. (Previously presented) The method of claim 2 wherein said unified processing is selected from the group consisting of: monitoring, analyzing, control, simulation, visualization, configuration, provisioning and design of said system.

34. – 41 (Cancelled).

42. (Previously presented) The method of claim 2 wherein said unified processing is selected from a group consisting: root cause analysis of events in said system, and correlation of events in said system.

43. (cancelled)

44. (Previously presented) The method of Claim 1 wherein the step of dividing said system comprises the step of:

defining said plurality of realms based on one or more models of said system or portions thereof.

45. (Original) The method of Claim 44 wherein said realms are defined by adding associations to one or more pre-existing models of the system.

46. – 61 (Cancelled).

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

62. (Currently amended) A model of a system having one or more components, the model comprising:

a plurality of realms having objects representing attributes and relationships of one or more of components or relationships between components, wherein said one or more components represented include at least one physical element of the system; wherein each of said plurality of realms contains at least one object common to at least two of said plurality of realms;

associations between said plurality of realms sufficient to unify objects in the said plurality of realms, wherein said associations represent an identification of said at least one object common to at least two of said plurality of realms,

a function in a first realm of the plurality of realms independent of said other realms of the plurality of realms, and

a behavior of one of the unified objects of [[one]] the first realm, based on the function, is propagated to said unified object of another a second realm of the plurality of realms using at least one association between the [[one]] first realm and the another second realm to determine the impact of the function of the first realm in the second realm.

63. (Cancelled)

64. (Previously presented) The model of Claim 62 wherein the objects corresponding to said associations in different realms are substantially identical.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

65. (Previously presented) The model of Claim 62 wherein the objects corresponding to said associations in different realms are different.

66. (Original) The model of Claim 65 wherein the objects in different realms have different attributes.

67. (Original) The model of Claim 62 wherein said associations comprise a relationship object between objects in different realms.

68. (Original) The model of Claim 62 wherein said plurality of realms are defined based on selecting subsets of components in said system.

69. (Original) The model of Claim 62 wherein said plurality of realms are defined based on different perspectives of the same component in said system.

70. (Original) The model of Claim 62 wherein said plurality of realms are defined based on different levels of abstraction of the same component in said system.

71. (Original) The model of Claim 62 wherein said system is an enterprise management system.

72. (Previously presented) The model of Claim 62 wherein said realms comprise one or more business service realms, one or more application realms, and/or one or more infrastructure realms.

72. (Cancelled)

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

72a. (Cancelled)

73. (Previously presented) The model of Claim 62 wherein said system is selected from the group consisting of: an engineering system, a distributed system, an application server system a networked system, an optical network, a wireless network, an IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an autonomic computing system, a grid system, an on-demand system or an adaptive system.

74. – 86. (Cancelled)

87. (Original) The model of Claim 62 wherein said system comprises a network, and wherein said plurality of realms comprises at least one realm modeling network infrastructure components and at least one realm modeling network security components.

88. (Currently amended) A computer program product in computer-readable media for modeling a system having one or more components, the computer program product comprising instructions for causing a computer to:

(a) divide said system into one or more components wherein components include at least one physical element of the system;

(b) define a plurality of realms including objects therein representing attributes and relationships of said one or more components, wherein said one or more

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

components represented include at least one physical element of the system; wherein
each of said plurality of realms contains at least one object common to at least two of said
plurality of realms;

(c) define associations between said plurality of realms sufficient to unify the realms, wherein said associations represent an identification of said at least one object common to at least two of said plurality of realms;

(d) unify objects in the realms based on said associations that said at least one object is common to at least two of said plurality of realms;

(e) process a function in a first realm independent of said other realms of said plurality of realms, and based on said function process; and

(f) propagate a behavior of one of the unified objects of [[one]] said first realm to said unified object of another a second realm of said plurality of realms using at least one association between the [[one]] first realm and the another the second realm to determine the impact of the function of the first realm in the second realm.

89. (Previously presented) The computer program product of Claim 88 further comprising instructions for causing the computer to:

perform unified processing of two or more realms by performing processing in each of said two or more realms, and combining results thereof based on said associations of said two or more realms.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

90. (Previously presented) The computer program product of Claim 88 wherein said system is an enterprise management system.

91. (Previously presented) The computer program product of Claim 88 wherein said realms comprise at least one realm modeling business service components and at least one realm modeling infrastructure components.

92. (Previously presented) The computer program product of Claim 88 wherein the unified processing identifies infrastructure problems impacting applications, applications impacting business services, or infrastructure problems impacting business services.

93. (Previously presented) The computer program product of Claim 88 wherein said system is selected from the group consisting of: an engineering system, a distributed system, an application server system, a networked system, an optical network, a wireless network, an IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an autonomic computing system, a grid system, an on-demand system or an adaptive system.

94. – 106. (Cancelled)

107. (Previously presented) The computer program product of Claim 88 wherein said system comprises a network, and wherein said plurality of realms comprises

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

at least one realm modeling network infrastructure components and at least one realm modeling network security components.

108. (Previously presented) The computer program product of Claim 88 wherein the step of dividing is performed automatically based on given properties of said one or more components.

109. (Previously presented) The computer program product of Claim 88 wherein the step of defining associations is performed automatically based on given properties of said objects.

110. (Previously presented) The computer program product of Claim 88 wherein the step of defining associations comprises identifying objects in different realms representing the same component.

111. (Previously presented) The computer program product of Claim 110 wherein the objects in different realms are substantially identical.

112. (Original) The computer program product of Claim 110 wherein the objects in different realms are different.

113. (Original) The computer program product of Claim 112 wherein the objects in different realms have different attributes.

114. (Original) The computer program product of Claim 88 wherein (c) comprises defining a relationship object between objects in different realms.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

115. (Original) The computer program product of Claim 88 wherein said plurality of realms are defined based on selecting subsets of components in said system.

116. (Original) The computer program product of Claim 88 wherein said plurality of realms are defined based on different perspectives of the same component in said system.

117. (Original) The computer program product of Claim 88 wherein said plurality of realms are defined based on different levels of abstraction of the same component in said system.

118. (Previously presented) The computer program product of Claim 89 wherein said unified processing is selected from a group consisting of: monitoring, analyzing, control, simulation, visualization, configuration, provisioning and design of said system.

119. – 126. (Cancelled)

127. (Previously presented) The computer program product of Claim 89 wherein said unified processing is selected from a group consisting of root cause analysis of events in said system, and correlation of events in said system.

128. (Cancelled)

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

129. (Previously presented) The computer program product of Claim 88

wherein the step of dividing comprises defining said plurality of realms based on one or more models of said system or portions thereof.

130. (Original) The computer program product of Claim 129 wherein said realms are defined by adding associations to said one or more models.

131. – 146. (Cancelled)

147. (Currently amended) An apparatus for modeling a system having one or more components, the apparatus comprising:

(a) means for dividing said system into one or more components wherein components include at least one physical element of the system;

(b) means for defining a plurality of realms including objects therein representing attributes and relationships of said one or more components, wherein said one or more components represented include at least one physical element of the system; wherein each of said plurality of realms contains at least one object common to at least two of said plurality of realms;

(c) means for defining associations between said plurality of realms sufficient to unify [[the]] said plurality of realms, wherein said associations represent represents an identification of said at least one object common to at least two of said plurality of realms;

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

- (d) means for unifying objects in the realms based on said associations that said at least one object is common to at least two of said plurality of realms;
- (e) means for processing a function in a first realm independent of said other realms of said plurality of realms, and based on said processing means; and
- (f) means for propagating a behavior, based on a result of said function, of one of the unified objects of [[one]] said first realm to said unified object of another a second realm of said plurality of realms using at least one association between the [[one]] first realm and the second another realm to determine the impact of the function of the first realm in the second realm.

148. (Previously presented) The apparatus of Claim 147 further comprising means for unified processing of two or more realms by performing processing in each of said two or more realms, and combining results thereof based on said associations of said two or more realms.

149. (Previously presented) The apparatus of Claim 147 wherein said system is an enterprise management system.

150. (Previously presented) The apparatus of Claim 147 wherein said realms comprise one or more business service realms, one or more application realms, and/or one or more infrastructure realms.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

151. (Previously presented) The apparatus of Claim 147 wherein the combined results identify infrastructure problems impacting applications, applications impacting business services, or infrastructure problems impacting business services.

150. (Cancelled)

151. (Cancelled)

152. (Previously presented) The apparatus of Claim 147 wherein said system is selected from the group consisting of: an engineering system, a distributed system, an application server system, a networked system, an optical network, a wireless network, an IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an autonomic computing system, a grid system, an on-demand system or an adaptive system.

153. – 164. (Cancelled)

165. (Previously presented) The apparatus of Claim 147 wherein said system comprises a network, and wherein said plurality of realms comprises at least one realm modeling network infrastructure components and at least one realm modeling network security components.

166. (Previously presented) The apparatus of Claim 147 wherein the step of dividing is performed automatically based on given properties of said one or more components.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

167. (Previously presented) The apparatus of Claim 147 wherein the step of defining associations is performed automatically based on given properties of said objects.

168. (Previously presented) The apparatus of Claim 147 the step of defining associations comprises:

means for identifying objects in different realms representing the same component.

169. (Previously presented) The apparatus of Claim 168 wherein the objects in different realms are substantially identical.

170. (Original) The apparatus of Claim 168 wherein the objects in different realms are different.

171. (Original) The apparatus of Claim 170 wherein the objects in different realms have different attributes.

172. (Previously presented) The apparatus of Claim 147 wherein the step of defining associations comprises means for defining a relationship object between objects in different realms.

173. (Original) The apparatus of Claim 147 wherein said plurality of realms are defined based on selecting subsets of components in said system.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

174. (Original) The apparatus of Claim 147 wherein said plurality of realms are defined based on different perspectives of the same component in said system.

175. (Original) The apparatus of Claim 147 wherein said plurality of realms are defined based on different levels of abstraction of the same component in said system.

176. (Previously presented) The apparatus of Claim 148 wherein unified processing is selected from the group consisting of: monitoring, analyzing said system.

177. (Original) The apparatus of Claim 148 unified processing comprises analyzing said system.

178. – 184 (Cancelled)

185. (Previously presented) The apparatus of Claim 148 wherein unified processing is selected from a group consisting of: root cause analysis of events in said system and correlation of events in said system.

186. (Cancelled)

187. (Previously presented) The apparatus of Claim 147 wherein the step of dividing comprises means for defining said plurality of realms based on one or more models of said system or portions thereof.

188. (Original) The apparatus of Claim 187 wherein said realms are defined by adding associations to said one or more models.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

189. – 204. (Cancelled)

205. (Currently amended) An apparatus for performing processing relating to a system having a plurality of components, comprising:

(a) a storage device for storing a model of the system, the model comprising a plurality of realms having objects therein representing attributes and relationships of said one or more components or relationships between components , wherein said one or more components include at least one physical element of the system, wherein each of said plurality of realms contains at least one object common to at least two of said plurality of realms, and associations representing an identification of the at least one common object between realms sufficient to unify objects in the realms of said plurality of realms , wherein associations represent at least one object common to at least two of said realms; and

(b) means for unified processing of two or more realms by performing processing of a function in a first realm of said plurality of realms independent of said other realms in each of said two or more realms, combining results thereof based on said associations of said two or more realms and based on said processing propagating a behavior of one of the unified objects of [[one]] the first realm to said unified object of another a second realm of said plurality of realms using at least one association between the [[one]] first realm and the another second realm to determine the impact of the function of the first realm in the second realm.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

206. (Original) The apparatus of Claim 205 wherein said system is an enterprise management system.

207. (Previously presented) The apparatus of Claim 205 wherein said realms comprise at least one realm modeling business service components and at least one realm modeling infrastructure components.

208. (Previously presented) The apparatus of Claim 205 wherein the unified processing identifies infrastructure problems impacting applications, applications impacting business services, or infrastructure problems impacting business services.

209. (Previously presented) The apparatus of Claim 205 wherein said system is selected from a group consisting of: an engineering system, a distributed system, an application server system, a networked system, an optical network, a wireless network, an IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an autonomic computing system, a grid system, an on-demand system or an adaptive system.

210. – 222. (Cancelled)

223. (Original) The apparatus of Claim 205 wherein said system comprises a network, and wherein said plurality of realms comprises at least one realm modeling network infrastructure components and at least one realm modeling network security components.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

224. (Previously presented) The apparatus of Claim 205 wherein unified processing is selected from a group consisting of: monitoring, analyzing, control, simulation, visualization, configuration, provisioning and design of said system.

225. – 232. (Cancelled)

233. (Previously presented) The apparatus of Claim 205 wherein unified processing is selected from a group consisting of: root cause analysis of events in said system, and correlation of events in said system.

234. (Cancelled)

235. (Cancelled)

236. (Currently amended) A method of modeling a system having one or more components, comprising:

(a) defining a plurality of realms including objects therein representing attributes and relationships of said one or more components , wherein said one or more components include at least one physical element of the system; wherein each of said plurality of realms contains at least one object common to at least two of said plurality of realms;

(b) creating associations between realms sufficient to unify the realms, wherein said associations represents an identification of said at least one object common to at least two of said realms; and

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

(c) unifying objects in the realms based said at least one object is common to at least two of said plurality of realms;

(d) unified processing of two or more realms by performing processing of a function in each of said two or more realms independent of said other realms, combining results thereof based on said associations of said two or more realms, and propagating a behavior of one of the unified objects of [[one]] a first realm to said unified object of another a second realm of said plurality of realms using at least one association between the [[one]] first realm and the another second realm to determine the impact of the function of the first realm in the second realm.

237. (Cancelled)

238. (Previously presented) The method of Claim 236 wherein said system is an enterprise management system.

239. (Previously presented) The method of Claim 236 wherein said realms comprise at least one realm modeling business service components and at least one realm modeling infrastructure components.

240. (Previously presented) The method of Claim 236 wherein said realms further include at least one realm modeling application components.

241. (Previously presented) The method of Claim 236 wherein said system is selected from a group consisting of: an engineering system, a distributed system, an application server system, a networked system, an optical network, a wireless network, an

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

IP network, a layered network, a Multi-Protocol Label Switching Virtual Private Network (MPLS VPN), a messaging system, an ERP system, a dynamic system, a static system, a utility computing system, an autonomic computing system, a grid system, an on-demand system or an adaptive system.

242. – 254. (Cancelled)

255. (Previously presented) The method of Claim 236 wherein said system comprises a network, and wherein said plurality of realms comprises at least one realm modeling network infrastructure components and at least one realm modeling network security components.

256. (Previously presented) The method of Claim 236 wherein the step of defining is performed manually.

257. (Previously presented) The method of Claim 236 wherein the step of defining is performed automatically based on given properties of said components.

258. (Previously presented) The method of Claim 236 wherein the step of creating associations is performed manually.

259. (Previously presented) The method of Claim 236 wherein the step of creating associations is performed automatically based on given properties of said objects.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

260. (Previously presented) The method of Claim 236 wherein the step of creating associations comprises identifying objects in different realms representing the same component.

261. (Previously presented) The method of Claim 260 wherein the objects in different realms are substantially identical.

262. (Original) The method of Claim 261 wherein the objects in different realms are different.

263. (Original) The method of Claim 262 wherein the objects in different realms have different attributes.

264. (Previously presented) The method of Claim 236 wherein step of defining comprises defining a relationship object between objects in different realms.

265. (Original) The method of Claim 236 wherein said plurality of realms are defined based on selecting subsets of components in said system.

266. (Original) The method of Claim 236 wherein said plurality of realms are defined based on different perspectives of the same component in said system.

267. (Original) The method of Claim 236 wherein said plurality of realms are defined based on different levels of abstraction of the same component in said system.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

268. (Previously presented) The method of claim 236 wherein said unified processing is selected from the group consisting of: monitoring, analyzing, control, simulation, visualization, configuration, provisioning and design of said system.

269. – 275. (Cancelled)

276. (Previously presented) The method of claim 236 wherein said unified processing comprises propagation of behaviors of said system across realms.

277. (Previously presented) The method of claim 236 wherein said unified processing is selected from a group consisting of: root cause analysis of events in said system, and correlation of events in said system.

278. (Cancelled)

279. (Previously presented) The method of Claim 236 wherein the step of defining comprises defining said plurality of realms based on one or more models of said system or portions thereof.

280. (Original) The method of Claim 279 wherein said realms are defined by adding associations to said one or more models.

281. – 296. (Cancelled)

297. (Original) The method of Claim 4 wherein said realms further include at least one realm modeling application components.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

298. (Previously presented)The method of Claim 2 wherein the unified processing identifies infrastructure problems impacting business services.

299. (Previously presented)The method of Claim 1 wherein the step of unifying is performed manually.

300. (Previously presented)The method of Claim 1 wherein the step of unifying is performed automatically.

301. (Previously presented) The method of claim 2 wherein said unified processing comprises event correlation of said system.

302. (Cancelled)

303. (Original) The computer program product of Claim 91 wherein said realms further include at least one realm modeling application components.

304. (Previously presented)The computer program product of Claim 91 wherein the unified processing identifies infrastructure problems impacting services.

305. (Original) The computer program product of claim 89 wherein said unified processing comprises for event correlation of said system.

306. (Previously presented)The apparatus of Claim 147 wherein said realms further include at least one realm modeling application components.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

307. (Previously presented) The apparatus of Claim 148 wherein the unified processing identifies infrastructure problems impacting applications, applications impacting services, or infrastructure problems impacting services.

308. (Original) The apparatus of Claim 148 wherein said unified processing comprises event correlation of said system.

309. (Previously presented) The apparatus of Claim 205 wherein said realms further include at least one realm modeling application components.

310. (Previously presented) The apparatus of Claim 205 wherein the unified processing identifies infrastructure problems impacting services.

311. (Original) The apparatus of Claim 205 wherein said unified processing comprises event correlation of said system.

312. (Previously presented) The method of Claim 236 wherein the unified processing identifies infrastructure problems impacting applications, applications impacting services, or infrastructure problems impacting services.

313. (Previously presented) The method of Claim 236 wherein the unified processing identifies infrastructure problems impacting services.

314. (Previously presented) The method of Claim 236 wherein said unified processing comprises event correlation of said system.

Applicant: Shaula Alexander Yemini, *et al.*
U.S.S.N.: 10/813,842
Filing Date: 3/31/2004
EMC Docket No.: EMC-05-098(PRO)ORD

315. (Previously presented) The method of Claim 236 wherein the step of unifying is performed manually.

316. (Previously presented) The method of Claim 236 wherein the step of unifying is performed automatically.

317. (Previously Presented) The model of claim 72 wherein said realms further include at least one realm modeling application components.

318. (Previously presented) The apparatus of claim 147 wherein said realms comprise at least one realm modeling business service components and at least one realm modeling infrastructure components.

319. (Previously presented) The apparatus of claim 147 wherein the unified processing identifies infrastructure problems impacting services.
